Red Siberian Crab	r.	3			Oct. Nov.	V. P., excellent to preserve
Yellow Siberian Crab	y.	3			Oct. Nov.	V. P., do. do.

For Ornamental varieties, see Ornamental Trees.

REMARKS.—The Apple is, undoubtedly, all things considered, the most valuable of our fruits. It is not merely as a dessert fruit that the apple may be prized; it is also valuable for cooking, and even for the feeding of stock. It is also in constant demand for exportation, and the more early and choice kinds find a ready market in all our large towns and cities. The tree is perfectly hardy and is well adapted to our climate. It will thrive in almost any soil, though a deep, rich gravelly loam with a dry subsoil will produce the finest trees and best fruit. The tree requires little pruning after the head has been well formed. All that is necessary is to remove the suckers from the boughs, and limbs that are decayed, or that in any way interfere with each other. The proper distance for planting the apple, where land is abundant, is from 30 to 40 feet, though a less distance will not retard the growth of the trees for many years. The ground before planting should be well cultivated and enriched; and the orchard should be annually manured. It should also be kept under constant cultivation with the potato or some other root crop.

PEARS.—*Pyrus communis*.

PRICE.—Standard Trees, on pear stocks, two years from the bud, $4\frac{1}{2}$ to 7 feet high, 50 cents each, or \$45 per hundred. For older and larger trees, 75 cents and upwards. Dwarf Trees, on quince stocks, 50 cents and upwards, according to size and quality. For new and rare sorts, though of small size, the usual catalogue price will be charged.

ABBREVIATIONS.

PREVAILING COLOR.—p. pale; d. dark; y. yellow; r. red; g. green; rus. russet; str. streaked; b. brown; c. crimson; o. orange

SIZE.—1, large; 2, medium; 3, small.

TEXTURE.—B. buttery; C. Crisp; J. juicy; M. melting; T. tender, between crisp and buttery—such as are softer than the crisp, yet not so fine as the buttery; F. firm.

QUALITY.—1, first rate; 2, second rate.

SEASON.—The month when ripe.

REMARKS.—P. productive; V. P. very productive.

Zoar Beauty	y. g. r.	2	B M	1	August	Nothing of the season excels

REMARKS.—The Pear, as a dessert fruit, has few equals. It has a melting and juicy texture, and is of a mild, rich and delicious flavor; and the delicious qualities of the improved varieties render it one of the most valuable of all fruits. It is of easy culture and very productive in this climate; and the trees retain their vigor and productiveness to a great age. By a judicious selection of varieties this luscious fruit can now be had in use throughout the entire year. The soil best adapted for its growth, is a deep, rich loam, with an open dry subsoil. It does not succeed upon a thin, wet, cold soil, laying upon a close, firm, hard pan; neither will it thrive upon a stiff, heavy, clay soil. The ground upon which the Pear is planted should be worked very deep and made rich. The distance for orchard culture may be 15 to 25 feet; although a less distance will answer for small gardens. As many varieties are now successfully grown upon the quince stock, which give the trees a dwarfish habit, these may be planted, alternately, with those upon the pear stock, at a

distance of eight feet ; and before the latter shall have attained a proper age and size to become productive, the former will have exhausted themselves by constant bearing from almost the very moment of being set out, and may then be removed to make room for those upon the pear.

PLUMS. — *Prunus domestica*.

PRICE.—Trees 2 years old, 5 to 7 feet high, 50 cents each, or \$40 per hundred. For older and larger trees, 75 cents and upwards. New and rare sorts, though of small size, will be sold at the usual catalogue price.

REMARKS.—The Plum will not succeed on a cold, wet, decided clay, or a dry sand. The best soil, says S. W. Cole, is a strong, moist, rich loam, inclining to clay—a dark, heavy mould—or a moist yellow loam. A black, muddy soil, moist, but not wet, is excellent. Some varieties, however, will succeed in soils tolerably dry. The Plum is usually most productive in hollows, and low, rich, moist soils; but on suitable soil it also succeeds on high lands. Fifteen feet is a good distance apart for planting; a less distance, however, will answer. The land should be well manured and cultivated, and the soil often stirred. Wood ashes, lime, old mortar, plaster, salt, &c., are good manures to promote the growth and health of plum trees, and to guard against insects. In suitable localities the Plum bears most abundantly, commands a high price, and is very desirable as a profitable market fruit.

CHERRIES.—*Prunus cerasus*.

PRICE.—Trees 2 years old, 5½ to 8 feet high, 50 cents each, or \$40 per hundred; for older and larger trees, 75 cents and upwards. For new and rare sorts, though of small size, the regular catalogue price will be charged.

For Ornamental varieties, see Ornamental Trees.

REMARKS.—The Cherry grows and thrives well in the United States in almost every variety of soil and climate, although it succeeds best in a dry rich mould, or in a deep loamy soil. Twenty to twenty-five feet apart is a proper distance for planting the trees. This fine fruit is becoming more and more highly appreciated, and will ere long be found on every farm, and in every garden. It is one of the most profitable market fruits grown, and its culture, especially in the vicinity of markets, will always afford a handsome return for the outlay. Farmers would especially find it profitable to ornament their premises by planting the Cherry freely about their dwellings.

PEACHES.—*Amygdalus Persica*.

PRICE.—17 to 25 cents each, or \$12 50 to \$15 per hundred, according to size and quality.

ABBREVIATIONS.

Many other varieties can be furnished but the foregoing list, it is believed, embraces nearly all that are really worthy of cultivation. For Ornamental varieties see Ornamental Trees.

REMARKS.—The Peach is the most successfully cultivated on a dry, gravelly, sandy soil, well elevated, with a northern rather than a southern exposure. The soil should be kept loose, and cultivated. Fifteen feet apart is a good distance for this tree.

NECTARINES.—*Amygdalus Nectarina*.

PRICE.—25 to 50 cents.

ABBREVIATIONS.—The same as for Peaches.

NAME.	Color.	Leaf.	Flwr.	Flesh.	Size.	Quali.	Season.	REMARKS.
Boston, or <i>Perkin's Seedling</i>	y. r.	G	S	F	1	1	b. Sept.	Superb
Bromfield	y. r.	R	S	C	1	2	m. Sept.	Melting, rich, excellent

PLANTS FOR EDGING BORDERS.

Dwarf Box, rooted plants, according to age and quality, 15 to 25 cents per yard according to quantity.
 Dwarf Iris, 15 cents per yard.

PÆONIES.

These flowers are indispensable to every garden, and are becoming very popular. They are second only to the Rose; and the different varieties keep up a fine display from the time that Tulips are in bloom until the period when the Summer Roses have finished blooming. They are hardy, and admirably adapted to a Northern climate.

TREE PÆONIES. PÆONIA ARBOREA, OR MOUTAN.

ROSES.

FIRST DIVISION.

SUMMER ROSES.

FLOWERING IN JUNE AND JULY.

[In the abbreviation of the form of the flowers, cup. signifies cupped ; exp. expanded ; comp. compact ; glob. globular.]

FRENCH ROSES. ROSA GALLICA.

The habit of the plants of the Gallica, or Provins Roses, is erect and compact ; and many of the varieties are very large, of fine form, and of the deepest and most brilliant colors. Many of them are striped and variegated, and of surpassing beauty. Those to which this sign (?) is affixed, we are not positive belong to this class.

NAME.	Price.	COLOR AND CHARACTER.
Adzit le Couvreur	50 cts.	Cup., purplish rose, spotted with white

Rose de Roi		
Reboule	50	Very double, large, cherry color
Wonder of the World	50	Blush rose, sometimes spotted with white

HYBRID CHINA ROSES.

This class of Roses are new and very splendid, and have been produced by hybridizing the hardy Garden Roses, and the Chinese, Bourbon, Tea-scented, Noisette, &c. They are all very vigorous and rapid growers; and their foliage is rich and luxuriant. They are admirably adapted for Pillar Roses; and combine a greater variety of color, form and fragrance than any other class; are perfectly hardy, and remain much longer in bloom than the common Summer Roses.

Those marked P. are particularly adapted for training on pillars, &c.

NAME.	Price.	COLOR AND CHARACTER.
Becquet	50 cts.	Dark crimson, very good variety
Belle Parabere	50	Fine crimson, showy and vigorous
Belzunce	50	Large, bright, deep pink, in clusters, fine
Brennus	50	Cup., brilliant crimson, very large, fine

Great Western, P.	75	Glob., deep red crimson, very large and robust
Lusseldemberg	50	Cup., rose, large and superb
Majestueux, P.	50	Cup., large, bright deep rose
Paul Perras	75	Cup., brilliant shaded rose, superb

PROVENCE, OR CABBAGE ROSES.

Of all the imported species this was the first introduced to this hemisphere ; and although it has been superceded by hundreds of new varieties belonging to those classes that furnish a profusion of bloom for a much longer period, still *the Old Provence, or Cabbage Rose*, is a "favorite flower." The Hybrid varieties of this class are intermediate between the French and the Provence Rose. They are very beautiful, and partake of the habits and character of both parents. In the following list they are marked Hy.

NAME.	Price.	COLOR AND CHARACTER.
Alain Blanchard, Hy:	50	Cup., dark crimson beautifully spotted
Aurelie, Hy.	50	Glob., deep rose, spotted with white

Unique	50	Glob., white, an old but good variety

DAMASK ROSES.

The Damask Rose, is so called from its having been brought originally from Damascus, in Syria. It is peculiarly fragrant although not a very interesting flower. The shoots are green, long and diffuse in their growth. Such of the *Damask perpetual* Roses as are inserted in this list are marked Pl.

NAME.	Price.	COLOR AND CHARACTER.
Barnard's Perpetual, Pl.	75 cts.	Cup., dwarf, superb, pink, extra fragrant, fine
Duke of Cambridge	50	Cup., large, deep rose, very fine and vigorous
Imperatrice	50	Cup., large, cherry rose

Princess Royal	75	Cup., dark crimson, semi-double, blooms profusely
Single Crimson	50	Exp., crimson, vigorous, profuse bloomer
White	75	Glob., blush white, glaucous foliage, distinct

CLIMBING ROSES.

Among these the PRAIRIE, or MICHIGAN ROSES, take the first rank. Their hardiness, rapid growth and luxuriant foliage, together with their very large and beautiful corymbs, or clusters of beautiful flowers, render them very desirable. They also flower from one to two weeks after the general flowering of other classes in June. The flowers of the Ayrshire Roses are small, but peculiarly delicate and beautiful, and some of them are quite fragrant. They are perfectly hardy, and rapid growers ; and are remarkable for growing and flourishing in the poorest soil. The Boursault Roses are distinguished by their redish-purple stems. They are abundant bloomers, perfectly hardy, and of remarkably vigorous growth. The Multiflora Roses are all pretty, but many of them are rather tender. The Microphylla Roses produce large, splendid cupped flowers, from June to November. Their foliage is remarkably delicate and beautiful.

The classes are designated as follows :—P. Prairie ; A. Ayrshire ; B. Boursault ; M. Multiflora ; Mi. Microphylla.

NAME.	Price.	COLOR AND CHARACTER.

Also, SWEET BRIARS, and many other Roses, not enumerated in the foregoing lists.

SECOND DIVISION.

PERPETUAL, OR AUTUMNAL ROSES.

BLOOMING FROM JUNE TILL NOVEMBER.

BOURBON ROSES. ROSA BOURBONIANA.

This class of Roses are unrivalled in splendor. The flowers are large and beautifully formed, and are produced in profuse clusters. They are rapid growers, in dry soils are quite hardy, and may be cultivated upon their own roots.

Those marked P. are suitable for training on pillars, &c.; those marked F. are particularly fragrant.

NAME.	Price.	COLOR AND CHARACTER.
Augustine Lelieur	50 cts.	Cup., bright rose, large

CHINESE EVER BLOOMING, OR BENGAL ROSES — ROSA INDICA.

This magnificent class of Roses are somewhat tender, but will withstand our winters with a slight covering.

NAME.	Price.	COLOR AND CHARACTER.
Madam Desprez	50 cts.	Very fine white

NOISETTE ROSES. — ROSA CHAMPNEYANA.

This class is distinguished by its immensely large clusters of flowers, frequently numbering forty to fifty flowers and buds in a single corymb. They are in bloom throughout the Summer and Autumn, but require a deep, rich soil. Most of the varieties are hardy, and others require very slight protection. Those marked P. are suitable for training on pillars, &c. ; those marked F. are particularly fragrant.

NAME.	Price.	COLOR AND CHARACTER.
Aimee Vibert, or Unique	\$ 50	Cup., pure white, in clusters, beautiful
Blush Cluster	50	Comp., fine, in immense clusters

A Card.

The subscriber, having disposed of his stock of Trees, Shrubs, Plants, &c. to the firm of ANTHONY & McAFEE, and retired from the Nursery business, which will be continued hereafter by them, takes great pleasure in recommending said Nursery firm to public confidence. The practical management of their Nursery will be in the hands of Mr. McAfee, who for the last five years has been in the employ of the subscriber as his foreman. During that period his accuracy, skill and fidelity in the propagation of fruits, trees, &c., and in the general care of the Nurseries, has been worthy of commendation, and afford a sure guarantee for the faithful and careful manner in which the business will hereafter be conducted. Mr. McAfee has also an extensive knowledge of the different varieties of fruits, and the constitution, habits, &c. of the different varieties of trees, and his opinion on these subjects may be fully relied upon by those whose acquaintance with Horticulture is too limited to enable them to make judicious selections for themselves.

HENRY H. CRAPO.

NEW BEDFORD, Feb. 10, 1853.
